# Generative Adversarial Networks (GAN)

● ...

- GAN models are known for potentially unstable training and less diversity in generation due to their adversarial training nature.

# Flow-Based Methods

● ...

- Flow models have to use specialized architectures to construct reversible transform.

# Energy-Based Methods

● ...

# Diffusion Models

● ...

- Diffusion models are inspired by non-equilibrium thermodynamics. They define a Markov chain of diffusion steps to slowly add random noise to data and then learn to reverse the diffusion process to construct desired data samples from the noise. Unlike VAE or flow models, diffusion models are learned with a fixed procedure and the latent variable has high dimensionality (same as the original data).
